SPERGON

The new outstanding seed treatment by dusting for the prevention of seed born diseases and fungi causing low germination of seed. It is non-poisonous and does not harm the seed under any conditions of soil, moisture or temperature, according to results to date. It can be used for all kinds of seed. You will be pleased and surprised with the results.

DEAR CUSTOMER:

We have had a number of inquiries about Combine Kafir. Since it is a new variety kafir, we feel it advisable to tell you something about it. Below is an excerpt from Progress Report 1064 of the Texas Agricultural Experiment Station at A & M College of Texas, written by R. D. Lewis, Director.

"Blackhul kafir has for many years been one of the most dependable and popular grain sorghum varieties. In recent years, kafir characteristics such as stiff stout stalk, long peduncle, and good exsertion have been basic to the double dwarf combine varieties most suitable to combine harvesting. Kafir appears somewhere as one of the parents of most combine varieties and milo is usually the other parent. Since kafir and milo differ in the inherited factors responsible for their dwarfness, double dwarf strains appear in the progeny of a cross between them. Selection from among such double dwarf plants has brought about the present day combine varieties. For the most part, red or yellow seeded strains have been preferred, although the seed colors obtained have been inferior to the milo yellow because of the presence of the blackish-purple plant color pigments common to the kafir parent.

Texas Blackhul kafir has been the kafir variety grown almost exclusively in Texas for many years, having the right adaptation for dependable performance. It appeared desirable to develop a dwarf Combine Kafir variety of the same excellence and dependability as this older variety. Beginning in 1942 double dwarf white-seeded selections were made in the progeny of a hybrid with Texas Blackhul. Further selections were again backcrossed twice with this recurring parent and combine types reselected from the progenies. This procedure has resulted in a number of strains of Double Dwarf Blackhul Kafir closely resembling Texas Blackhul and suitable as combine kafir varieties. The best of these strains are being increased for distribution to growers.

Combine Kafir is a double dwarf variety closely resembling Texas Blackhul Kafir. The stalk is thick and stout. It bears 14 to 15 mature leaves, tillers slightly and will stand long after maturity or until after frost for combine harvesting. Heads are long and cylindrical. Exsertion from the boot is good. Seed are white with the black specks or spots typical of kafir and are medium size and somewhat hard. This variety blooms in 75 days, matures in 110 to 115 days."

At this time we have a supply of Combine Kafir at the price stated in this price list. It will be a pleasure to supply you with your requirement of this Kafir.

With best regards, we are

Yours very truly,

Associated Seeds, Inc
